The plastics rear end attachment is embodied by a short length of tube 205 made of a material known as "DELRI<sup>N</sup>". The length of the liner tube 183' is such that the rear end 205 is at a scarce distance, advantageously in the order of a few tenths of a millimetre, from the forward end of the cylinder of the revolver (not illustrated), practically abutting against the forcing cone of the revolver barrel when the liner tube 183' is inside the revolver barrel and immobilized by the nut 197 expanding the sleeve 203. Use of the plastics rear-end attachment 205 provides for a quieter shot in revolvers. No accesory tools are needed for loading and unloading the pellet 43. --.
